

Automatic Bag Selector Valves

The Automatic Selector Valve (ASV) allows two or more Bag-in-Box containers to be connected in parallel to a single pump. When vacuum build up indicates the on-line box is empty, the ASV automatically switches over to the second box, eliminating the need to change boxes during peak business periods. New boxes can then be hooked up at a suitable time to ensure continuous supply. Further benefits of the ASV are with clear syrups where it gives operators the opportunity to keep a constant supply of syrup thereby avoiding dispensing a spoiled drink.

Reference	Description	Use with	Packed as
165-110 ★	ASV 12" hg (41kPg)	Brix and Electric pumps	30
94-350-03	ASV 18" hg (61kPg) (90° elbow liquid out)	Gas pumps	30
